

## *List of Compliance Assistance Tools for Auto Recycling Facilities*

This table contains a list of compliance assistance tools developed by EPA, states, and other groups for auto recycling facilities. For each tool, the table lists the name of the assistance tool, the URL where it can be found, and an indication of the environmental focus area(s) that the tool addresses. While EPA has tried to be as comprehensive as possible in developing this table, this table is likely not a complete list of compliance assistance tools available for this sector. In addition, this table does not provide information on the level of detail included in the tools listed in the table. EPA does not guarantee the accuracy or completeness of any tool included in this table. Always check with the applicable regulatory agency for specific regulatory requirements.

The information in this table has been integrated into a searchable database—the Electronic Compendium of Compliance Assistance Tools (E-CCAT). You can find this database at <http://www.epa.gov/clearinghouse/ECCAT>.

This table includes items that EPA identified as of 21 March 2003. EPA will periodically update this table to include new items as necessary. All tools listed in the table are also included in EPA's Compliance Assistance Clearinghouse (<http://www.epa.gov/clearinghouse/>).

To make the listings easier to navigate, EPA divided them into three categories based on how directly they address the auto recycling industry. A brief description of these categories follows:

### **Auto Recycling-Specific Resources**

These are resources created specifically for the auto recycling industry. They contain information and examples that directly address the environmental issues involved with the day-to-day operations of an auto recycling business.

### **Auto Industry Resources**

These are more general resources aimed at businesses, often auto repair shops, in the automotive industry. Although not aimed specifically at auto recycling yards, the majority of the information is directly applicable to recycling businesses. Important issues such as proper disposal of waste oil and hazardous materials found in automobiles are addressed in these types of resources.

### **Resources of Interest**

These are general environmental resources that are not geared for any specific industry. They do, however, contain information that is useful to auto recycling businesses. For example, they may contain information on underground storage tanks, general permits required for scrap metal, or guidelines for refrigerant disposal.

### **About the 'Environmental Focus' Categories**

'*Vehicular Fluids*' includes antifreeze, brake fluid, gasoline, diesel fuel, power steering fluid, transmission fluid, used oil, and windshield washing fluid.

'*Other Vehicular Wastes*' includes asbestos, paint and body shop wastes, and plastics.

'*Process Auto Salvage Wastes*' includes aerosol cans, shop towels/rags, empty containers, absorbents, etc.
